VILLAGE ADMINISTRATOR'S REPORT

Bats – The Village received notice from the Westchester County Department of Health that during the month of August, residents are most likely to find a bat in their home. Last week alone, 51 bats have been brought to the health department for testing because they were found in a home. This is compared to 30 during the same time period last year. Also, during the first two weeks of August, 16 people have had to start preventive rabies treatment because they were exposed to a bat but did not catch the bat so it could be tested for rabies. According to the County Health Commissioner, “Most of the time, the bats tested are not rabid, so you and your family can be spared unneeded treatment. But rabies is fatal, so without the bat to test, you will most likely have to get rabies shots.” For those who capture the bat, 97 percent of the bats tested do not have rabies.

The Village has placed the information provided by the Health Department on our website. There is information on the County Health Department website, www.westchestergov.com/health, explaining how to catch a bat if you have one in your house.
